January 1999 – August 2001

CONSULTANT COST

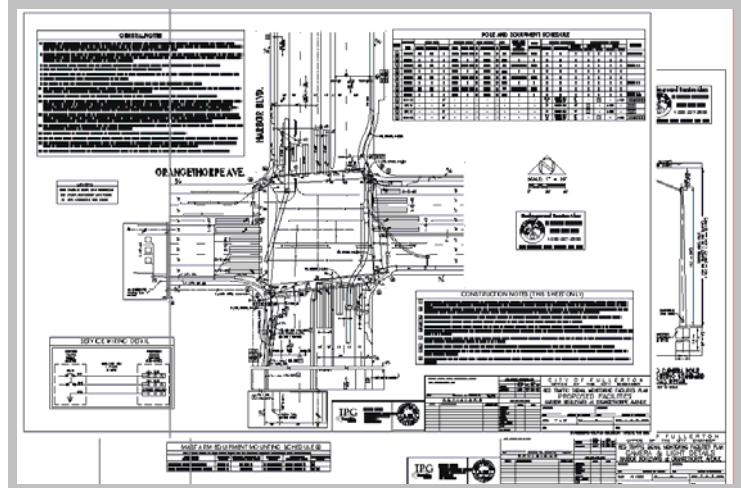

\$ 24,700

FIRM INVOLVEMENT

Prime Engineer

PROJECT STATUS

Design Completed

RED TRAFFIC LIGHT MONITORING SYSTEM HARBOR BLVD. AT ORANGETHORPE AVE.

FULLERTON, CA

TPG Consulting recently completed detailed construction plans for the installation of a Red Traffic Light Monitoring System at the intersection of Harbor Blvd. and Orangethorpe Avenue in the City of Fullerton, California. The project provides for video monitoring of the multilane north and southbound approaches to the intersection on Harbor Blvd. The project required the coordination review and approval of the City of Fullerton. The plans included the positions for the traffic signal and lighting standards that support the complex camera and incandescent lighting facilities, as well as installation of the specialized controller cabinet, underground conduits, pull boxes, and other associated system components. State of California Department of Transportation (*Caltrans*) standards were followed in the design of the project.
