TRAFFIC IMPACT STUDY FOR WESTLAKE FARMS BIOSOLIDS COMPOSTING FACILITY

KINGS COUNTY, CA

TPG Consulting, Inc. was hired to conduct a Traffic Impact Study to assess the traffic impacts resulting from the proposed construction of the Westlake Farms Biosolids Composting Facility in Kings County.

Biosolids are the result of treated municipal wastewater. Through the treatment process, impurities are removed and collected into a stabilized residue, called biosolids. Biosolids are then applied to vacant land, providing a cost effective disposal solution, while also fertilizing the land.

To prepare the traffic evaluation, a variety of field data and technical information was gathered. To analyze the traffic impacts, four (4) scenarios were evaluated over two (2) time periods including analysis of two (2) segments and three (3) intersections. Also considered was the truck traffic to the disposal site, originating from Los Angeles via Interstate 5, to State Route 41 in rural Kings County.

This impact study was conducted in coordination with the County of Kings and Caltrans District 6.
